

Asset Specifications & Forms

The Asset Data Forms are for gathering information on newly installed equipment. This information is entered into the University of Minnesota Facilities Management Department's maintenance database (TRIRIGA). It is used to develop preventive maintenance programs, budgets, and to monitor life cycle costs.

The equipment forms can be found on the FM website at: <https://facilities.umn.edu/our-services/architect-and-vendor-resources/equipment-specifications-forms>.
